More particularly, the invention relates to a method of driving a liquid crystal display device for improving the quality of an image displayed by the liquid crystal display device, and a liquid crystal display device using the method. FIG. 1 illustrates a liquid crystal display device using a conventional horizontal driving method. The conventional liquid crystal display device comprises a thin film transistor TFT (TFT) 21 connected to a data line DL, a gate line GL, and a drain line DL, and a pixel electrode PIX connected to the thin film transistor TFT 21. The pixel electrode PIX is a transparent electrode. The liquid crystal display device further comprises a common electrode CPLX formed on a liquid crystal layer CL. A timing controller 60 controls the data line DL and the gate line GL, and supplies a data signal D to the data line DL according to a control signal G from a shift register SR. A timing controller 60 also controls the thin film transistor TFT 21, and supplies a gate signal
